There are 3 major parts of the respiratory system: the airway, the lungs, and the muscles of respiration. The airway, which includes the nose, mouth, pharynx, larynx, trachea, bronchi, and bronchioles, carries air between the lungs and the body's exterior. The lungsContinue Scrolling To Read More Below...

Respiratory System | Interactive Anatomy Guide

Respiratory System Anatomy - Major Zones & Divisions. The respiratory is separated into the conducting zone and the respiratory zone. The conducting zone include structures that facilitate air to move in and out of the lungs. The respiratory zone allow inhaled oxygen to diffuse into the lung capillaries in exchange for carbon dioxide.

Respiratory System • Anatomy, Parts & Functions

Physiology of the Respiratory System. The major function of the respiratory system is to supply the body with oxygen and to dispose of carbon dioxide. To do this, at least four distinct events, collectively called respiration, must occur. Respiration

Respiratory System Anatomy and Physiology - Nurseslabs

The respiratory system supplies the blood with oxygen to be delivered to all parts of the body. The system does this through breathing. The air we breathe in (inhalation) is rich in oxygen, which is used by body tissues to maintain life functions. We exhale the carbon dioxide that these tissues produce as a waste product.

Interactive Physiology The Respiratory System Answers

Interactive Physiology 4 • The abundant elastic tissue in the lungs tends to recoil and pull the lung inward. As the lung moves away from the thoracic wall, the cavity becomes slightly larger. The negative pressure this creates acts like a suction to keep the lungs inflated. 3. The elasticity of the thoracic wall.
