The third iteration of SME's 3009 is one of the most versatile tonearms around. For the same reason, it is also one of the most tedious to set-up because, since every parameter is adjustable, every parameter must be adjusted. Unlike most arms with plug-in headshells, the SME has a plug-in arm, which accomplishes the same thing but places the additional mass of the plug and socket back near the tonearm base, where its effect on the cartridge-system effective mass is minimal.

3009 series II tonearm can develop with age is a sagging counterweight, this is caused by hardening of the coupling rubber which secures the tonearm stub to the main tonearm tube. Another point to note about the SME 3009 series II (and most of it's variants) is that the inner tonearm wire is not up to the standards of

The 3009 (with 9" pivot-to-stylus distance) is the arm we recommend for the home user, and it shares with the 3012 the distinction of being the most versatile conventional-type tonearm on the market today. It has wide-range adjustments for tangency, height, static balance, torsional balance, pickup tilt, bias compensation, and tracking force.
